

Questions and Answers (From April 8 to April 19, 2004)

- 1.) There are some wall type discrepancies between the wall data tables (C3.2 to C3.9) and sections (C4.1 to C4.8). Do the wall tables govern over the section, or vice versa?
Answer: The wall tables are correct and govern over the sections.
- 2.) The trench for the fountain piping and the recirculation line could be made narrower if the pipes could be stacked, can we assume that we can stack the pipes in the trench?
Answer: The project should be bid as it is shown currently on the solicitation web page. Any value engineering type change proposals shall be in accordance with clause 52.248-3 on page 135 of 156 in the specifications.
- 3.) Is the rock excavation for the 6" channel paving at the pump station paid for under base bid quantities to the top of the 6" slab. *Answer: The 6" inch channel paving is part of option 3, therefore the excavation to put in the 6" channel paving should be bid under option 3 as well.*
